

CTGP-7 Installation Instructions

Installation methods:

To play CTGP-7, make sure you have installed [Custom Firmware](#) and your system version is 11.4 or greater. The mod has an automatic updater, so you do not need to reinstall everything on every update. Visit the [CTGP-7 webpage](#) for more information.

CTGP-7 is provided as two application types:

- a) **Cia (recommended):** Installs to the home menu like any other app. You will be able to launch the mod directly from the home menu.
- b) **3dsx:** Can be launched from the Rosalina homebrew launcher. It does not require the installation of cia files, but it still requires custom firmware.

Method 1: Installing directly from a 3DS:

This method can be used to install the mod if you do not have access to a device to copy the files to the SD card. However, you will need an internet connection in your 3DS. Due to the slow internet connection of the 3DS, this method can take some time to complete.

- 1) Open **FBI**, then go to **Remote Install** and finally **QR Code**. Scan one of the following QR codes:

CIA Downloader 3DSX Downloader

- 2) After the install is done, open the **CTGP-7 Downloader** app and follow the steps there. This process can take some time.
- 3) Once the download finishes and the app closes, the mod will be installed.

Method 2: Using a PC to install:

This method requires a PC with a supported operating system or a working python installation.

- 1) Download the appropriate PC installer for your operating system. If your operating system is not listed, you can use the python files directly, but make sure to install the dependencies listed in the README.
- 2) Insert your 3DS SD card into your computer. Make sure it's accessible before proceeding to the next step.

- 3) Run the installer, and a GUI will open. From this GUI you can choose the folder where your 3DS SD card is located (normally, it is detected automatically).
- 4) Press the install button and wait for the installation to complete.
- 5) Reinsert the SD card into your 3DS, go to **FBI**, navigate to **SD**, then **CTGP-7** and finally **cia**. Select the cia file and press **Install**. Alternatively, open the Homebrew Launcher and launch the CTGP-7 application.

Uninstalling:

To uninstall the mod, go to **FBI**, then **Titles**, from the list select **CTGP-7** and choose **delete title**. After that, you can delete the **CTGP-7** folder on your SD card as well as the **3dsx** inside the **3ds** folder if it exists.

If you would like to make a backup of your save data, make sure to make a copy of the **savefs** folder found inside the **CTGP-7** folder before deleting it.
